

Introducing the iKey® StreetCase™

PROTECT YOUR TECH

Turn Your iPad into a Rugged Laptop

Designed with enterprise and government users in mind, the iKey® StreetCase™ is the first product on the market designed to instantly transform an iPad into a rugged laptop.

With the click of a button, an iPad easily locks into the durable ABS polycarbonate case, giving the user the protection of an industrial-grade solution at a fraction of the cost. When closed, the iKey StreetCase fully shields the iPad from drops, vibration, and extreme temperatures. The iKey StreetCase can even be submersed in water without causing harm to the tablet.

The iKey StreetCase has an integrated Bluetooth®-compatible keyboard that is completely sealed to withstand the elements. Its three levels of red LED backlight can always be seen clearly, even during nighttime use.

The keyboard can be used for two months on a single charge, and has a micro USB charging port. Along with a full QWERTY layout, the StreetCase includes iPad-specific hot keys for media controls, search function, home screen and locking.

Built for in-vehicle use, the StreetCase has an integrated VESA pattern on the bottom, which easily fits into existing vehicle mounts. It is also available with an optional quick release mount that allows the user to effortlessly go from in-vehicle use to the field in seconds.

In addition, the case can be locked to prevent theft of the iPad. When in the field, the StreetCase can easily be carried with the robust handle or optional shoulder strap.

- Carrying handle and optional carrying strap

- iPad easily snaps into case
- Fully sealed and submersible while closed
- Protects against shock and vibration
- Sealed Bluetooth® keyboard
- iPad-specific hot keys
- Two-month battery life
