● Introduction

Providing networking ability and various digital I/O functions, the PETL-7000 and tET/tPET series are IP-based Ethernet I/O monitoring and control modules. The module can be remotely controlled through a 10/100 M Ethernet network by using Modbus TCP/UDP protocol. Modbus has become a de facto standard communications protocol in industry, and is now the most commonly available means of connecting industrial electronic devices. This makes the PETL-7000/tET/tPET series perfect integration with the HMI, SCADA, PLC and other software systems.

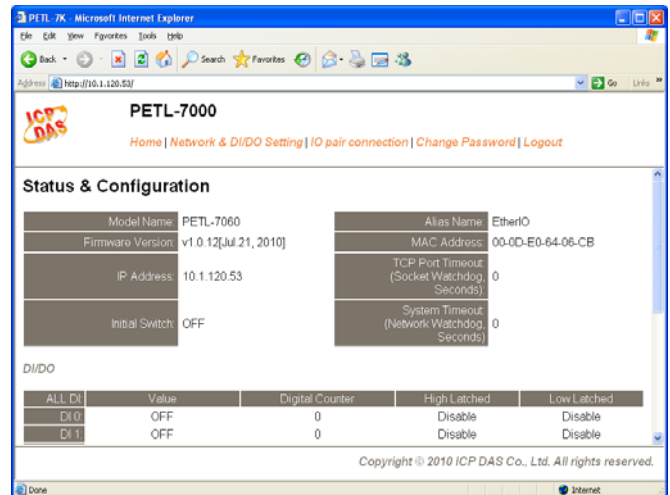

The functionality of the PETL-7000/tET/tPET series modules is almost the same as the PET-7000 series. The PETL-7000/tET/tPET series Ethernet I/O modules support various I/O types, like photo-isolated digital input, relay contact, PhotoMOS relay, and open-collector output. The module can be used to create DI to DO pair-connect through the Ethernet. Once the configuration is completed, the modules can poll the status of the local DI channels and then use the Modbus/TCP protocol to continuously write to a remote DO device in the background. It's useful when connecting digital I/O devices that do not themselves have Ethernet capability.

Note: tET = tPET without PoE.

DHCP minimizes configuration errors caused by manual IP address configuration, such as address conflicts caused by the assignment of an IP address to more than one computer or device at the same time. The PETL-7000/tET/tPET series module supports the DHCP client function, which allows to PETL-7000/tET/tPET easily obtain the necessary TCP/IP configuration information from a DHCP server. The module also contains a UDP responder that transmits its IP address information a UDP search from the eSearch utility program, making local management more efficient.

The series of Ethernet I/O modules features a powerful 32-bit MCU to enable efficient handling of network traffic. It also has a built-in web server that provides an intuitive web management interface to allow users to modify the settings of the module including DHCP/Static IP, gateway/mask and serial ports.

The module provides dual watchdog: CPU watchdog (hardware function) and host watchdog (software function). The CPU watchdog which automatically resets the CPU if the built-in firmware is operating abnormally, while the host watchdog set the digital output with predefined safe-value when there is no communication between the module and the host (PC or PLC) for a period of time (watchdog timeout). The dual watchdog is an important feature that ensures the module operates continuously, even in harsh environments.

The PETL-7000/tPET series module offers true IEEE 802.3af-compliant (classification, Class 1) Power over Ethernet (PoE) using a standard category 5 Ethernet cable to receive power from a PoE switch such as the NS-205PSE. If there is no PoE switch on site, the module will also accept power input from a DC adapter. The PETL-7000/tET/tPET series is designed for ultra-low power consumption, reducing hidden costs from increasing fuel and electricity prices, especially when you have a huge amount of device servers installed. Reducing the amount of electricity consumed by choosing energy-efficient equipment can have a positive impact on maintaining a green environment.

The module is equipped with removable terminal block connectors to allow easy wiring. For maximum space savings, the tET/tPET series is offered in an amazing tiny form-factor while the PETL-7000 series is palm-size form-factor; this makes them can be easily installed in anywhere, even directly embedded into a machine.

Features

- Cost-effective Ethernet I/O modules (Modbus TCP/UDP slave)
- Contains a 32-bit MCU that efficiently handles network traffic
- 10/100 Base-TX Ethernet, RJ-45 x1 (Auto-negotiating, Auto MDI/MDIX, LED Indicator)
- Includes redundant power inputs: PoE and DC input
- Supports TCP, UDP, HTTP, DHCP, BOOTP and TFTP protocols
- Supports UDP responder for device discovery
- Supports web configuration and firmware update via Ethernet
- Various digital input and output types
- Supports latched DI and 32-bit high-speed counter functions
- Supports I/O pair-connection through the Ethernet
- Dual-watchdog with power-on and safe value
- Easy DIN-Rail mounting
- RoHS compliant with no Halogen
- Made from fire retardant materials (UL94-V0 Level)
- Low power consumption (about 1.7 W only)

 Tiny Ethernet I/O modules

Features

- Cost-effective tiny Ethernet I/O modules (Modbus TCP/UDP slave)
- Contains a 32-bit MCU that efficiently handles network traffic
- 10/100 Base-TX Ethernet, RJ-45 x1 (Auto-negotiating, auto MDI/MDIX, LED Indicators)
- Includes redundant power inputs: PoE and DC input
- Supports TCP, UDP, HTTP, DHCP, BOOTP and TFTP protocols
- Supports UDP responder for device discovery
- Supports web configuration and firmware update via Ethernet
- Isolated Digital Input and Output
- Supports latched D/I and 32-bit low-speed counter functions
- Supports I/O pair-connection through the Ethernet
- Dual-watchdog with power-on and safe value
- Tiny form-factor with easy DIN-Rail mounting
- RoHS compliant with no Halogen
- Made from fire retardant materials (UL94-V0 Level)
- Low power consumption (about 1.7 W only)

Max. Load Current	-	5.0 A/channel at 25 °C	
Operate Time	-	6 ms	
Release Time	-	3 ms	
Electrical Life (Resistive load)	VED	-	5 A 250 V _{AC} 30,000 ops (10 ops/minute) at 75 °C
		-	5 A 30 V _{DC} 70,000 ops (10 ops/minute) at 75 °C
	UL	-	5 A 250 V _{AC} /30 V _{DC} 6,000 ops
		-	3 A 250 V _{AC} /30 V _{DC} 100,000 ops
Mechanical Life	-	20,000,000 ops. At no load (300 ops./ minute)
